

KEVAL SOMPURA

(201)589-3134 | sompurakeval@gmail.com | linkedin.com/in/kevalsom | github.com/keval-som | Jersey City, NJ

Education

Stevens Institute of Technology

Master of Science in Computer Science

Hoboken, NJ

September 2024 - May 2026

NMIMS, Mukesh Patel School of Technology Management and Engineering

Bachelor of Technology in Information Technology

Mumbai, India

June 2018 - May 2022

Work Experience

Lentra

Software Engineer

Pune, India

May 2022 - November 2023

- Delivered home loan platform features for a major private-sector bank processing 750+ weekly applications, owning end-to-end delivery from requirements and system design through UAT and production release in Q1 2023
- Optimized Java Spring Boot microservices across Lentra's distributed lending platform, reducing API latency by 25% across mortgage lending pipelines deployed on AWS ECS with CloudWatch observability
- Redesigned JUnit testing infrastructure across critical backend services, increasing test coverage from 46% to 85% and reducing regression issues in production loan processing workflows
- Built an async callback-based integration layer to handle external service timeouts, ensuring near-zero API failures for large payload workflows and eliminating client-facing wait times
- Automated underwriting data ingestion into the loan eligibility engine, triggering real-time credit decisioning workflows and reducing overall loan processing time by 2 days

Blitz Jobs

Software Development Intern

Mumbai, India

May 2021 - June 2021

- Launched an Android application in Java and Firebase for rooftop-solar sales partners, driving a 30% increase in partner engagement and a 10% lift in sales conversion
- Designed RESTful API integrations connecting the mobile app to CRM backend systems, enabling real-time lead synchronization and streamlining data ingestion across the sales workflow
- Instrumented Firebase Analytics dashboards, reducing manual KPI reporting effort by 40% and surfacing real-time visibility into underperforming sales territories

Skills

Languages: Java, Python, C++, C, JavaScript, TypeScript, HTML, SQL, GraphQL

Frameworks & Libraries: Spring Boot, Node.js, Netty, JSQParser, Caffeine, HikariCP, React.js, Hibernate, Mockito, Bootstrap

Cloud & DevOps: RabbitMQ, AWS (ECS, S3, IAM, VPC, CloudWatch), GCP, Docker, Kubernetes, CI/CD (GitHub Actions, Jenkins)

Databases: PostgreSQL, Redis, MongoDB, MySQL, Firebase

Tools & Other: Maven, Git, Jira, Bitbucket, Postman, VS Code, Android Studio, Figma, Flutter

Projects

Advisor AI | *Python, Node.js, AWS, Docker, MongoDB*

GitHub

- Developed full-stack backend using FastAPI and MongoDB with a React frontend, implementing real-time SSE streaming, Firebase authentication, and RESTful API endpoints for a live academic advising platform
- Deployed and maintained the production system on Google Cloud Run via Docker, managing containerized service configuration and integrating upstream AI inference components into the backend API layer
- Connected teammates' LangGraph multi-agent pipeline and fine-tuned LLaMA-2-7B model to the backend, ensuring reliable low-latency inference responses under concurrent user load

Ride Share | *Node.js, AWS, Docker, MongoDB*

GitHub

- Designed and implemented RESTful microservices for ride booking, authentication, and trip orchestration, supporting concurrent user requests at scale
- Engineered geospatial ride-matching algorithms using optimized queries and indexing, improving search performance by 30% and reducing latency
- Containerized and deployed all backend services using Docker, ensuring environment consistency and enabling reproducible builds across development and production

Shadow Proxy | *Java, Netty, PostgreSQL, Docker*

GitHub

- Designed a distributed caching layer using Caffeine and Redis, reducing database load and improving response times
- Architected a resilient SQL gateway with AST-based query parsing, read-write splitting, and circuit breaker patterns for fault tolerance
- Built asynchronous messaging pipelines using RabbitMQ to decouple telemetry and improve system observability
